Haringey

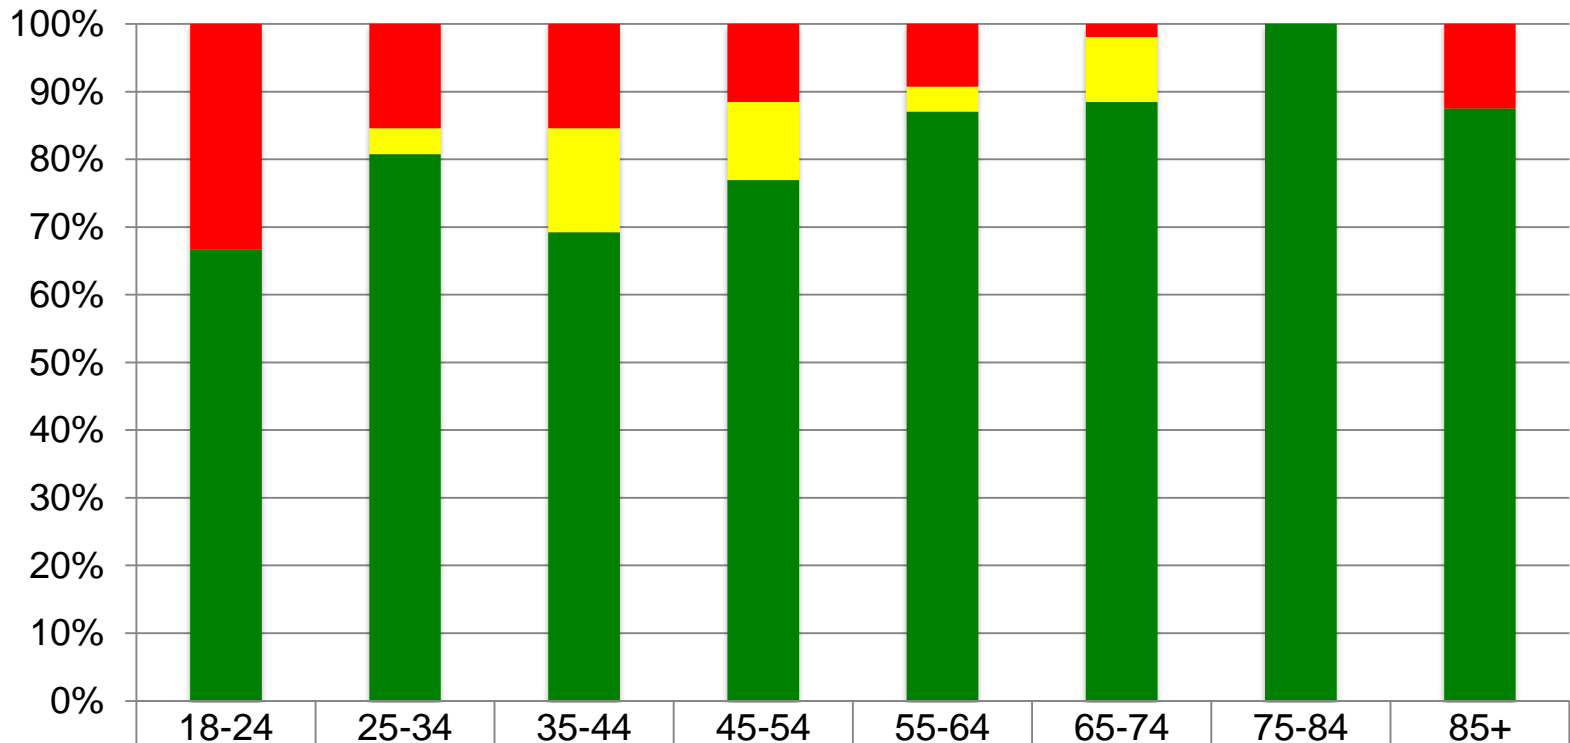

Survey Participants: Demographics

- Age breakdown - good spread amongst the ages, except very few young people (18 to 24 years) and very few older people (85 years and over)

18-24 years	3
25-34 years	26
35-44 years	39
45-54 years	52
55-64 years	54
65-74 years	53
75-84 years	34
85+ years	9

- Participants come from all wards within the borough
- Online survey - Survey Monkey
- Surveys completed January and February 2021

When you are offered the COVID-19 vaccine will you have it?

	18-24	25-34	35-44	45-54	55-64	65-74	75-84	85+
No	33%	15%	15%	12%	9%	2%	0%	13%
Don't Know	0%	4%	15%	12%	4%	10%	0%	0%
Yes	67%	81%	69%	77%	87%	88%	100%	88%

Age

Reasons for wanting the COVID-19 vaccine?

For anyone aged 55 and over, by far the most popular answer, and their key motivation for wanting to have the COVID-19 vaccine, was to ensure they did not get sick with coronavirus.

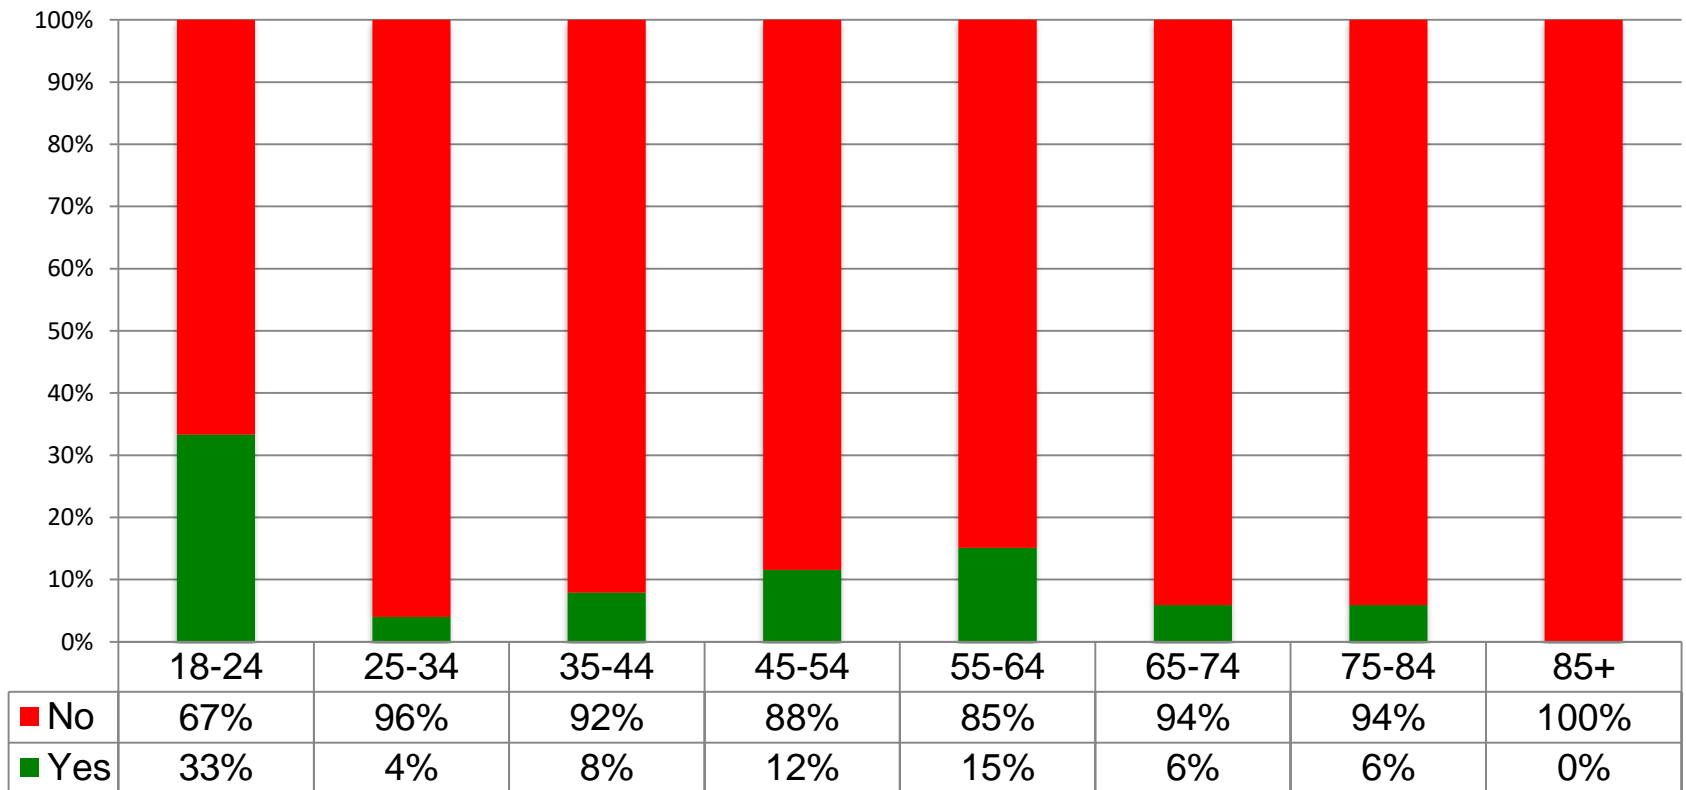

For those aged under 55, the reasons for wanting to have the COVID-19 vaccine were more varied - wanting their life to get back to normal and to be able to go out and about and meet friends and family was the key motivation. But wanting to keep their household safe from COVID-19, and not wanting to get sick with the virus themselves, were also important considerations.

Concerns / worries about the COVID-19 vaccine

For anyone aged under 45, by far the most popular answer, and the key reason for their vaccine hesitancy, was a feeling that the vaccine had not been tested enough.

For those aged 45 and over, the reasons for vaccine hesitancy were more varied - there were concerns around vaccine ingredients, concerns around side effects, a desire for more information, and a desire to wait and see what happens with the vaccine rollout. Thinking the vaccine had not been tested enough was not an issue for this age cohort.

Have you changed your mind about having the COVID-19 vaccine in the last couple of months?
